Serial No.: 09/747,920

Amendment Dated: January 19, 2005 Reply to Office Action of December 7, 2004

## AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the above-captioned patent application:

## **Listing of Claims:**

(Currently Amended) A refrigerated merchandiser system comprising:

an insulated cabinet defining a product display area and having a compartment separate from product display area;

an air circulation circuit connecting said product display area and said compartment in air flow communication;

an evaporator disposed within said compartment;

at least one of air circulating fan disposed within said compartment in laterally spaced relationship upstream of the evaporator with respect to air flow;

a flow baffle having a plurality of flow apertures extending therethrough, said flow baffle disposed in <u>and generally transversely across</u> the air circulation circuit intermediate the evaporator and the at least one fan to provide a generally more uniform air flow entering the evaporator.

- 2. (Original) A refrigerated merchandiser system as recited in claim 1 wherein the evaporator comprises a fin and tube heat exchanger having a fin density in the range of 6 fins per inch to 15 fins per inch.
- (Previously Presented) A refrigerated merchandiser system as recited in claim 1 wherein said flow baffle comprises at least one perforated member.
- 4. (Original) A refrigerated merchandiser system as recited in claim 1 wherein said flow baffle comprises at least one screen mesh member.
- 5. (Previously Presented) A refrigerated merchandiser system as recited in claim 1 wherein said flow baffle comprises at least one slotted member.

Serial No.: 09/747,920

Amendment Dated: January 19, 2005 Reply to Office Action of December 7, 2004

- 6. (Original) A refrigerated merchandiser system as recited in claim 1 wherein said flow baffle comprises at least one member having a honeycomb structure of flow passages therethrough.
- 7. (Currently Amended) A refrigerated merchandiser system as recited in claim 1 wherein <u>comprising</u>:

an insulated cabinet defining a product display area and having a compartment separate from product display area;

an air circulation circuit connecting said product display area and said compartment in air flow communication;

an evaporator disposed within said compartment;

at least one air circulating fan disposed within said compartment upstream of the evaporator with respect to air flow;

a flow baffle having a plurality of flow apertures extending therethrough, said flow baffle disposed in the air circulation circuit intermediate the evaporator and the at least one fan to provide a generally more uniform air flow entering the evaporator.

said plurality of flow apertures extending through said flow baffle have having a collective flow area comprising from about 15% to about 40% of the nominal flow area of the air circulation circuit between said fans and said evaporator.
